Abstracts

According to our (Global Info Research) latest study, the global Chiral Acid Catalysts market size was valued at US\$ 15.47 million in 2025 and is forecast to a readjusted size of US\$ 23.05 million by 2032 with a CAGR of 5.9% during review period.

Chiral acid catalysts are acidic compounds or ligand-type catalysts that induce chirality in chemical reactions, promoting asymmetric transformations. By providing a chiral environment, they enable substrates to form products with specific stereochemistry. These catalysts are widely applied in the synthesis of pharmaceutical intermediates, natural products, and fine chemicals. Their catalytic mechanisms include proton transfer, ion-pair catalysis, and cooperative bifunctional catalysis. Unlike chiral metal catalysts or chiral organic base catalysts, chiral acid catalysts are driven by acidic centers, achieving unique stereoselectivity and broad substrate compatibility. The global chiral acid catalyst market in 2025 is estimated at USD 15 million, with a CAGR of 6%, nominal global capacity of 50 tons/year, and actual annual consumption of 3 tons.

In terms of pricing, chiral phosphoric acids (approximately 70% share) are priced at USD 10,000/kg, sulfonic acids at USD 5,000/kg, carboxylic acids at USD 2,000/kg, and other strong acids at USD 25,000/kg, resulting in a weighted average price of USD 7,000/kg; downstream applications are dominated by pharmaceutical intermediates (75%), followed by agrochemicals (15%) and specialty chemicals (10%), with upstream inputs including BINOL/SPINOL scaffolds and organophosphorus/sulfonation reagents, and downstream integration into CDMO and pharmaceutical process systems; the competitive structure is characterized by a fragmented landscape with catalog-based suppliers and internal CDMO consumption; overall, the market exhibits high value density, low volume, and strong process lock-in, representing a niche embedded

functional molecule market.
