According to our (Global Info Research) latest study, the global Chiral Chromatography Column market size was valued at USD 90 million in 2023 and is forecast to a readjusted size of USD 121.1 million by 2030 with a CAGR of 4.3% during review period.

Chiral column chromatography is a variant of column chromatography in which the stationary phase contains a single enantiomer of a chiral compound rather than being achiral. The two enantiomers of the same analyte compound differ in affinity to the single-enantiomer stationary phase and therefore they exit the column at different times.
