Abstracts

According to our (Global Info Research) latest study, the global Chiral Phase-Transfer Catalysts?CPTC? market size was valued at US\$ 86.04 million in 2025 and is forecast to a readjusted size of US\$ 139 million by 2032 with a CAGR of 6.9% during review period.

Chiral phase-transfer catalysts (CPTCs) are a class of chiral organocatalysts that enable enantioselective reactions via phase-transfer mechanisms, typically facilitating the transport of ionic species across immiscible phases. They are commonly based on quaternary ammonium/phosphonium salts or crown ether derivatives and are widely used in pharmaceuticals, agrochemicals, and fine chemicals, particularly for α -alkylation and related transformations. This is a product-based catalyst market, excluding service and CDMO revenues.

Global nominal capacity is about 70 tons per year, mainly provided by a small number of specialty chemical producers and custom manufacturing platforms with chiral synthesis capabilities, implying a utilization rate of roughly 49%. Product structure is dominated by cinchona-derived quaternary ammonium CPTCs (68%), followed by phosphonium salts and immobilized products. End-use demand is led by pharmaceuticals (~58%), followed by agrochemicals (27%) and fine chemicals (15%), with major use in α -alkylation, Michael addition, and amino acid derivative synthesis. The value chain runs from upstream cinchona alkaloids, chiral amines, and halogenated intermediates, to midstream CPTC design and scale-up manufacturing, and downstream API and agrochemical producers. The competitive landscape is characterized by fragmented supply and relatively concentrated usage: sales are dispersed across specialty chemical and reagent channels, while industrial consumption

is more concentrated among large pharma companies and CDMOs. Structurally, the market is a small but mature niche, driven by high selectivity, low metal residue, and process simplicity, but constrained by low catalyst loadings, substitution pressure, and limited scale-up economics.
