## Abstracts

The global Chitosan Antibacterial Fabric market size is expected to reach \$ 5342 million by 2032, rising at a market growth of 11.5% CAGR during the forecast period (2026-2032).

Chitosan antibacterial fabrics use cotton, polyester, nylon, or viscose fabrics as the base material, incorporating chitosan antibacterial finishing agents through padding, coating, or blending. This gives the fabrics long-lasting antibacterial properties, skin-friendly safety, and a certain degree of biodegradability, making them widely used in medical textiles, functional clothing, home textiles, and public health fields. The upstream raw materials mainly include chitosan powder, textile base fabric, crosslinking agents, and auxiliaries. Downstream suppliers are primarily medical dressing and surgical textile companies, functional clothing brands, and home textile companies. Demand and opportunity analysis shows that the normalization of antibacterial protection needs in the post-pandemic era, coupled with the increased medical needs due to aging, and the continued strengthening of green and sustainable textile trends, are driving the accelerated penetration of chitosan antibacterial fabrics in high-end medical, maternal and infant products, and functional home textile fields. These fabrics are expected to maintain stable growth and high added value potential over the next five years.
