## Abstracts

According to our (Global Info Research) latest study, the global Chitosan Antibacterial Fabric market size was valued at US\$ 2483 million in 2025 and is forecast to a readjusted size of US\$ 5342 million by 2032 with a CAGR of 11.5% during review period.

Chitosan antibacterial fabrics use cotton, polyester, nylon, or viscose fabrics as the base material, incorporating chitosan antibacterial finishing agents through padding, coating, or blending. This gives the fabrics long-lasting antibacterial properties, skin-friendly safety, and a certain degree of biodegradability, making them widely used in medical textiles, functional clothing, home textiles, and public health fields. The upstream raw materials mainly include chitosan powder, textile base fabric, crosslinking agents, and auxiliaries. Downstream suppliers are primarily medical dressing and surgical textile companies, functional clothing brands, and home textile companies. Demand and opportunity analysis shows that the normalization of antibacterial protection needs in the post-pandemic era, coupled with the increased medical needs due to aging, and the continued strengthening of green and sustainable textile trends, are driving the accelerated penetration of chitosan antibacterial fabrics in high-end medical, maternal and infant products, and functional home textile fields. These fabrics are expected to maintain stable growth and high added value potential over the next five years.
