## Abstracts

According to our (Global Info Research) latest study, the global Chitosan Sponge market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Chitosan sponges are absorbent surgical dressings made from chitosan, a natural biopolymer derived from chitin, which is found in the shells of crustaceans like shrimp and crab. Chitosan sponges are highly biocompatible and biodegradable, making them an attractive material for use in wound healing and tissue engineering applications. Chitosan sponges have a porous structure that allows them to absorb fluids, making them effective wound dressings. They are also capable of releasing bioactive compounds, such as growth factors and antibiotics, that can improve wound healing and prevent infection. Additionally, chitosan sponges have been shown to support tissue regeneration and repair by promoting the growth of new blood vessels and helping to maintain cellular integrity. Chitosan sponges are typically produced by crosslinking chitosan polymers with chemical agents to create a porous structure. The resulting sponges can be sterilized and packaged for use in medical applications.
