Abstracts

The global Chlordecone market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The industry trend for Chlordecone reflects a global shift towards sustainable and eco-friendly agricultural practices. There is a growing emphasis on the development and use of alternative, less harmful pesticides, as well as increased regulation and restrictions on persistent organic pollutants. The legacy issues associated with Chlordecone have prompted a reevaluation of pesticide use, with a focus on mitigating environmental impacts and promoting safer, more sustainable agricultural methods. The trend involves increased awareness of the long-term consequences of pesticide use, driving innovation in agricultural practices and the adoption of greener alternatives to safeguard both ecosystems and human health.

Chlordecone, also known as Kepone, is a synthetic organochlorine pesticide that was extensively used in the mid-20th century for insect control in agriculture. It is a highly stable and persistent chemical with adverse environmental and health effects. Chlordecone has been linked to soil and water contamination, leading to concerns about its impact on ecosystems and human health. Due to its persistence, it has been banned in many countries, but its historical use has left long-lasting environmental challenges, particularly in areas where it was heavily applied.
