Abstracts

According to our (Global Info Research) latest study, the global Chlorinated Flame Retardant market size was valued at USD 1104.2 million in 2023 and is forecast to a readjusted size of USD 1611.6 million by 2030 with a CAGR of 5.6% during review period.

Chlorinated flame retardants are still widely used because of their low price. Chlorinated paraffin with the highest chlorine content is an important flame retardant in industry. Due to its poor thermal stability, it is only suitable for composite materials with processing temperature less than 200?. Chlorinated lipopyclic hydrocarbon and tetrachloro-phthalic anhydride have higher thermal stability and are commonly used as flame retardants for unsaturated resin.

The market for flame retardants, including chlorinated types, is influenced by fire safety regulations and consumer awareness. Trends focus on developing more environmentally friendly flame retardant alternatives while maintaining efficacy.
