The global Chlorine-free PPS Resin market size is expected to reach \$ 78.39 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

The Chlorine-free PPS Resin Stent Retriever is formulated to provide a non-toxic alternative for medical applications, ensuring patient safety by eliminating the potential for harmful chlorine-based by-products. The material's exceptional mechanical properties, including high strength and flexibility, enable effective stent retrieval while maintaining minimal invasive procedures. The resin's resistance to degradation and its compatibility with various medical environments contribute to the long-term stability and reliability of the device, making it a preferred choice for ensuring optimal clinical outcomes. In 2025, global Chlorine-free PPS Resin production reached approximately 5619 tons with an average global market price of around US\$8200 per ton.

As environmental awareness grows and regulatory standards become more stringent, the demand for chlorine-free PPS Resin is increasing across industries such as medical, electronics, and automotive. Companies are facing opportunities to expand their market share and boost revenue, driven by the rising demand for environmentally friendly materials and the regulatory requirement for chlorine-free characteristics. Technological innovation is a key driver, with enterprises striving to develop high-performance chlorine-free PPS Resins while optimizing production processes to reduce costs. The concept of global expansion and the circular economy also presents new growth opportunities for the industry. In the face of intensifying market competition, companies must enhance product competitiveness, strengthen sustainability practices, and optimize supply chain management to ensure robust revenue growth and profit enhancement in the field of environmentally friendly materials.
