Abstracts

Chloroacetic acid, also called Chloroacetic acid (MCA), is a bi-functional molecule-structured acid. At room temperature, pure MCA is a colorless, deliquescent crystalline mass. It is very soluble in water, freely soluble in methanol, ethanol, isopropanol, diethyl ether and acetone. It is extensively used as a chemical intermediate for the production of numerous industrially and commercially important chemicals, including glycine, CMC, TGA, and cyanoacetic acid. It is also used in the production of betaine-type surfactants, synthetic caffeine, and vitamins, and the production of 2, 4-D and methanoates for using in herbicides. MCA is commercially produced through the chlorination of acetic acid during the production of acetic anhydride as a catalyst.

MCA is marketed in various forms: as a solid (powder or flakes), in molten form (kept at a temperature 80°C) or as 80% dilution in water. For these forms of packaging, exposure estimates are made.

Scope of the Report:

This report focuses on the Chloroacetic Acid (Monochloroacetic Acid) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

MCA downstream is wide and the major fields are carboxymethyl cellulose (CMC), agrochemical, surfactants and thioglycolic acid (TGA). CMC is acting as a major driving force for the growth of the global chloroacetic acid market. The growth of the CMC market is further being augmented by the increased demand for CMC for oil drilling

operations from the oil and gas industry in USA and the Middle East. The global MCA market will continue to be driven by the Chinese market. China currently accounts for half of global MCA consumption. And Europe are accounting for about 21.29% production market shares in 2016.

At present, in Europe and USA, the chloroacetic acid industry is generally at a more advanced level. The world's large enterprises are mainly concentrated in these regions. With the development of Chinese chloroacetic acid production technology, the competitiveness in the global market gradually increases.

The worldwide market for Chloroacetic Acid (Monochloroacetic Acid) is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
