Abstracts

According to our (Global Info Research) latest study, the global Chloroacetyl Chloride market size was valued at USD 163.1 million in 2023 and is forecast to a readjusted size of USD 198.8 million by 2030 with a CAGR of 2.9% during review period.

Chloroacetyl chloride, a colorless to yellow liquid, is a bi-functional compound that is useful as a chemical building block. This chemical is mainly used in the production of herbicides, in the formulation of active pharmaceutical ingredients, and in the production of other useful chemicals.

The main use of chloroacetyl chloride is in the manufacturing of herbicides used in agriculture. Especially, popular herbicides such as alachlor and butachlor are manufactured using chloroacetyl chloride. However, due to the fact that such herbicides create environmental pollution, production and use of alachlor and butachlor has been banned in the EU region. However, several countries in Latin America and in the Asia Pacific region continue the use of such herbicides and therefore the demand of these herbicides is steady and rising. This is expected to boost the growth of the global chloroacetyl chloride market. In case of medical emergencies, the human body is unable to produce the adrenalin hormone. Thus, demand for externally produced adrenalin is expected to increase due to an increasing risk of life threatening diseases. Chloroacetyl chloride is used in the production of epinephrine (adrenalin hormone). This is also expected to fuel the growth of the global chloroacetyl chloride market over the forecast period.
