Abstracts

The global Chlorogenic Acid market size is expected to reach \$ 202 million by 2032, rising at a market growth of 2.7% CAGR during the forecast period (2026-2032).

Chlorogenic acid (CGA) is a natural chemical compound which is the ester of caffeic acid and (?)-quinic acid. It is an important biosynthetic intermediate. Chlorogenic acid is an important intermediate in lignin biosynthesis. This compound, known as an antioxidant, may also slow the release of glucose into the bloodstream after a meal. The term chlorogenic acids can also refer to a related family of esters of hydroxycinnamic acids (caffeic acid, ferulic acid and p-coumaric acid) with quinic acid. Chlorogenic Acid and other caffeoyl esters are among the most potent free radical scavengers found in plant tissues. Chlorogenic Acid has a very high alkyl peroxy radical scavenging activity. Compared to about eighteen other compounds, (including quercetin, gallic acid, alpha-tocopherol), chlorogenic acid was only second to rutin. According to literature reports, in particular, the inhibitory potency of chlorogenic acid on ONOO-scavenging (peroxynitrite radical) is considerable when compared with other metabolites, natural products or synthetic compounds. Chlorogenic Acid is therefore a natural antioxidant with potential applications in antiaging compositions and in compositions that provide active protection against oxidation, and damage by free radicals.

Global Chlorogenic Acid key players include Naturex, Applied Food Sciences, EUROMED SA, Sabinsa Corporation, Zhejiang Skyherb, etc. Global top five manufacturers hold a share about 35%. China is the largest market, with a share about 40%, followed by North America, with a share about 30 percent. In terms of product, Green Coffee Bean Extract (HPLC 45%-50%) is the largest segment, with a share about 65%. And in terms of application, the largest application is Supplements, followed by Cosmetics, Pharmaceuticals, etc.
