Abstracts

The global Chlorosulfonated Polyethylene (CSM) market size is expected to reach $ 150 million by 2032, rising at a market growth of 9.3% CAGR during the forecast period (2026-2032).

Chlorosulfonated polyethylene (CSM) is a kind of white or light color elastomer which is charactered by its own unique properties as well as the same characteristics as the raw rubber. In aromatic and chlorine hydrocarbons, it can be soluble, but in ketones and ether, it can be only swelling, not soluble. The chemical structure bond of CSM is completely saturated, so the vulcanizate has excellent properties, such as ozone resistance, weather and aging resistance, chemiacal resistance, ionizing radiation resistance, colorability, good physical and mechanical properties, thermal aging resistance, heat and low temperature resistance, flame retardancy, abrasion resistanceand wonderful electric insulation, etc.

From a market development perspective, CSM (Chemical Rubber Sandwich) has entered a relatively mature stage. Future growth will likely stem more from stable demand in existing high-performance applications and upgrades to high-end materials, rather than explosive expansion through large-scale replacement of natural rubber, EPDM, or ordinary CPE. CSM's most prominent advantages remain its long-term outdoor weather resistance, ozone resistance, chemical corrosion resistance, flame retardancy, and color stability. KRAHN currently categorizes its main applications as cables and hoses, membrane materials, molded parts, and sealing components, emphasizing its resistance to UV, ozone, oils, and other media. For products with long lifecycles and high failure costs, such as chemical plant linings, industrial hoses, mining and conveying equipment, marine rubber sheets, and outdoor cables, material reliability is often more important than raw material price alone. Therefore, CSM maintains strong

irreplaceability.

Wires and cables and high-reliability industrial rubber products will continue to provide a stable demand base for CSM. CSM (Chemical Rubber Sleeve) possesses a saturated main chain, good electrical insulation, flame retardancy, and ozone resistance, offering significant advantages in cable sheathing under long-term outdoor exposure or simultaneous exposure to oil, heat, ultraviolet radiation, and mechanical abrasion. Sundow currently uses automotive hoses, seals, wires and cables, rubber rollers, and specialty rubber products as core applications for its various SUNPREN CSM grades. Global electrification, industrial equipment upgrades, and the construction of new energy infrastructure have increased the demand for high-durability cables and flexible connectors.

The demand structure in the automotive sector will undergo significant adjustments. Traditionally, CSM has been used in automotive oil lines, hydraulic systems, and other heat- and oil-resistant hoses. However, the development of new energy vehicles will reduce the demand for some traditional engine fuel and hydraulic lines; therefore, ordinary automotive hoses are not the strongest source of future growth. Nevertheless, the high-reliability wiring harnesses, cable protection, special seals, and thermal management peripheral rubber components brought about by automotive electronics and electrification provide new application opportunities for heat-resistant, ozone-resistant, and flame-retardant specialty elastomers.

Report Scope

This report studies the global Chlorosulfonated Polyethylene (CSM) production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Chlorosulfonated Polyethylene (CSM) and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Chlorosulfonated Polyethylene (CSM) that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Chlorosulfonated Polyethylene (CSM) total production and demand, 2021-2032, (Ton)

Global Chlorosulfonated Polyethylene (CSM) total production value, 2021-2032, (USD Million)

Global Chlorosulfonated Polyethylene (CSM) production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Ton), (based on production site)

Global Chlorosulfonated Polyethylene (CSM) consumption by region & country, CAGR, 2021-2032 & (Ton)

U.S. VS China: Chlorosulfonated Polyethylene (CSM) domestic production, consumption, key domestic manufacturers and share

Global Chlorosulfonated Polyethylene (CSM) production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Ton)

Global Chlorosulfonated Polyethylene (CSM) production by Mooney Viscosity, production, value, CAGR, 2021-2032, (USD Million) & (Ton)

Global Chlorosulfonated Polyethylene (CSM) production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Ton)

This report profiles key players in the global Chlorosulfonated Polyethylene (CSM) market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Tosoh, Jilin Petrochemical, Jiangxi Hongrun Chemical, Weifang Polygrand Chemical, Weifang Sundow Polymers, Shandong Shanxu New Material, Weifang Kerming Chemical, YQXPOLYMER, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Chlorosulfonated Polyethylene (CSM) market
