Abstracts

Chlorothalonil is a white, gray or canary yellow powder, with chemical formula of $C_8Cl_4N_2$. With solubility of 0.6 mg/L in water under 25°, chlorothalonil is considered insoluble. Chlorothalonil is slightly toxic to mammals, but it can cause severe eye and skin irritation in certain formulations.

Chlorothalonil is a broad-spectrum organochlorine pesticide (fungicide) used to control fungi that threaten vegetables, trees, small fruits, turf, ornamentals, and other agricultural crops. It also controls fruit rots in cranberry bogs, and is used in paints.

Scope of the Report:

This report focuses on the Chlorothalonil (CAS 1897-45-6) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. China is the largest supplier with nearly 80% share of the global production market. Among the top five manufacturers of chlorothalonil, three manufacturers are located in China, and Suli Chemical has the largest capacity in the global. The other manufacturers are Switzerland based Syngenta and Japan based SDS Biotech. Different from the production market, the consumption market is related to the distribution of farmland. Europe is the largest consumption market, slightly ahead of United States.

The price and gross margin of chlorothalonil varies largely. Before 2015, the price of chlorothalonil is in decrease trend due to the big expansion of capacity in the 2000s. But later it is in increasing trend due to the market demand and production reduction of Syngenta.

The worldwide market for Chlorothalonil (CAS 1897-45-6) is expected to grow at a CAGR of roughly 9.2% over the next five years, will reach 330 million US\$ in 2023, from 200 million US\$ in 2017, according to a new GIR (Global Info Research) study.
