According to our (Global Info Research) latest study, the global Choke Manifold Control System market size was valued at US\$ 720 million in 2025 and is forecast to a readjusted size of US\$ 948 million by 2032 with a CAGR of 4.0% during review period.

In 2025, global choke manifold control system production reached approximately 4663 units, the average price is 150 k usd/unit. A choke manifold control system is a system used in drilling/well control operations to remotely adjust the opening of choke valves, hydraulic gate valves, and safety valves on the choke manifold, provide sequential interlocking, and ensure safety protection. It typically consists of a driller's platform/PLC, a hydraulic station/electro-hydraulic actuator, displacement/pressure sensors, and an overflow valve assembly to achieve controllable backpressure relief at the wellhead, prevent overpressure, and coordinate with well control operations.

The gross profit margin of the throttling manifold control system is around 25%.
