According to our (Global Info Research) latest study, the global Cholesterol Lowering Biologic Drugs market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The cholesterol lowering biologic drugs offers a new, revolutionary alternative for people fighting with cholesterol with the same old treatments. The old method of treating cholesterol elevated levels includes a change in diet and consuming statin pills to prevent the body from making more bad cholesterol. The new class of PCSK-9 inhibitors is being approved by the FDA which works by helping the liver flush out the bad cholesterol instead of preventing the body from making low-density lipoproteins. The FDA has till now approved only two drugs Praluent and Repatha, both made from living things. The PCSK-9 is a protein which binds to the receptors, those which are responsible for getting the bad cholesterol out of the body.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market

and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
