According to our (Global Info Research) latest study, the global Cholesterol Vaccines market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

High levels of low-density lipoprotein (LDL) cholesterol can cause artery blockages and diseases like heart attacks and strokes. Further, it raises the risk of cardiovascular disease (CVD). Although medicine and lifestyle modifications can considerably lower LDL, a considerable portion of at-risk individuals who are receiving therapy nevertheless experience a cardiovascular event. Vaccines targeting proprotein convertase subtilisin/kexin 9 (PCSK9), an important regulator of LDL receptors, can be highly beneficial.
