## Abstracts

The global Cholesterol Vaccines market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High levels of low-density lipoprotein (LDL) cholesterol can cause artery blockages and diseases like heart attacks and strokes. Further, it raises the risk of cardiovascular disease (CVD). Although medicine and lifestyle modifications can considerably lower LDL, a considerable portion of at-risk individuals who are receiving therapy nevertheless experience a cardiovascular event. Vaccines targeting proprotein convertase subtilisin/kexin 9 (PCSK9), an important regulator of LDL receptors, can be highly beneficial.
