Abstracts

The global Chopped Strand Glass Mat market size is expected to reach \$ 280 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global chopped stand glass mat production reached approximately 296 m sqm, the average price is 680 usd/k sqm. Chopped stand glass mat is a kind of nonwoven felt material made of chopped glass fibers randomly arranged and pressed by binder. It has the characteristics of light weight, porous, corrosion resistance, heat insulation and sound insulation, and is widely used in the fields of reinforced substrates, filter materials, heat insulation gaskets and the like of composite materials (such as glass fiber reinforced plastics).

Market Concentration and Key Players:

Internationally, the market concentration of chopped glass felt is relatively high, mainly concentrated in developed countries in Europe and America. For example, Owens Corning and 3B and other large manufacturers; from the domestic point of view, chopped glass fiber mat has a lot of room for development.

Manufacturing Processes and Market Trends:

Chopped strand glass mat production begins with cutting continuous glass fiber strands into short segments, followed by mat formation by wet or dry processes. In the wet process, chopped fibers are uniformly dispersed in water to form slurry, which is then taken and dehydrated to deposit randomly on the screen. The dry process uses air to make the fibers fall down and spread evenly on the mesh belt. Then a powder or emulsion-like binder is applied, heated and cured by a drying tunnel, and finally cut and

rolled to obtain the finished product. The core lies in realizing two-dimensional random uniform distribution of fibers and fixing the structure by adhesive.

Current market trends are closely following global industrial upgrading and environmental requirements. High performance and differentiation are the development themes, such as the development of lightweight high-strength felts for battery cases in new energy vehicles, or high-modulus varieties for wind blades. The sustainability drive is increasingly evident, with the industry actively developing recyclable thermoplastic binders and exploring applications for bio-based materials. In addition, the level of automation and intelligence in production is constantly increasing, aiming at optimizing product uniformity and reducing energy consumption. Overall, the market is deepening from general-purpose products to customized and green solutions for high-end applications of composite materials.
