## Abstracts

The global Chromatographic Purification Media market size is expected to reach \$ 2378 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

In 2025, global sales of Chromatographic Purification Media reached approximately 0.8 million liters, with an average market price of about USD 2,300 per L, an annual production capacity of roughly 1.3 million liters, and an industry-average gross margin of approximately 58%.

Chromatographic Purification Media generally refers to the stationary-phase materials used in liquid chromatography purification, often called chromatography media or resins. In essence, they are composed of porous inert matrices such as cross-linked agarose, synthetic polymers, or ceramic/inorganic supports combined with functional ligands. These materials separate and purify biomolecules such as monoclonal antibodies, antibody fragments, vaccines, nucleic acids, and recombinant proteins through affinity, ion exchange, hydrophobic interaction, size exclusion, or mixed-mode mechanisms. Public sources show that these media are core consumables in downstream bioprocessing: Protein A is commonly used for capture in antibody processes, while ion exchange, hydrophobic interaction, and mixed-mode media are widely used for intermediate purification and polishing.

From the industry-chain perspective, the upstream side mainly includes natural or synthetic matrix materials such as agarose, polymethacrylate, polystyrene, and ceramic supports together with functional ligands such as Protein A, ion-exchange groups, hydrophobic ligands, and metal-chelate ligands, as well as crosslinkers, coupling reagents, buffers, and packaging systems. The downstream is concentrated in

biopharmaceutical companies, CDMOs, vaccine manufacturers, plasma-product companies, research institutes, and diagnostics producers, where these media are used for the downstream purification of monoclonal antibodies, bispecifics, Fc-fusion proteins, vaccines, plasmids, viral vectors, and other recombinant proteins.
