Abstracts

The global Chromatography-Grade Acetonitrile market size is expected to reach \$ 138 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Chromatography-grade Acetonitrile is a high-purity colorless solvent specially refined for use as a mobile phase in liquid chromatography (HPLC, LC-MS, UHPLC) and spectrophotometry. It is characterized by low UV absorbance, minimal residue, and low water content, ensuring high sensitivity and stable baselines in sensitive analysis.

In 2025, global production of chromatography-grade acetonitrile reached 12.2 k tons, with an average selling price of USD 7,129 per ton. Total installed capacity was approximately 20 k tons, and industry gross margins typically ranged from 20% to 40%. The cost structure consisted of about 70% direct materials, around 25% manufacturing overhead, and approximately 5% labor. The industry value chain comprises upstream suppliers of petrochemical feedstocks, acrylonitrile, propylene, crude acetonitrile, catalysts, and other raw materials, while downstream applications include chromatography and analytical reagent distributors, pharmaceutical companies and CROs, environmental and food testing, clinical laboratories, and universities and research institutions.

This report studies the global Chromatography-Grade Acetonitrile production, demand, key manufacturers, and key regions.
