## Abstracts

According to our (Global Info Research) latest study, the global Chromatography Systems market size was valued at USD 6542.1 million in 2023 and is forecast to a readjusted size of USD 8620.2 million by 2030 with a CAGR of 4.0% during review period.

Chromatography is a laboratory technique used for separation of mixture and utilized in different ways. Chromatography is an essential technique for life science research, agriculture, biotechnology and pharmaceutical industry. Chromatography technique isolates the mixture into two phases specifically mobile phase and stationary phase. The mobile phase travels through the stationary phase by taking compound to be tested with it. At different points in the stationary phase the different components of the compound get absorbed and stop moving with the mobile phase.
