Abstracts

The global Chromium Nickel Molybdenum Alloy market size is expected to reach $ 4307 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Chromium-nickel-molybdenum alloy (ChNMA) is a high-performance alloy material composed primarily of chromium, nickel, and molybdenum. Depending on the matrix, it can be formed into stainless steel, corrosion-resistant alloys, and high-temperature alloys. It possesses excellent corrosion resistance, resistance to pitting and crevice corrosion, and also exhibits high strength, toughness, and high-temperature stability, making it widely used in chemical, energy, and high-end equipment industries.

Upstream applications mainly include chromium, nickel, molybdenum, iron, and other alloying elements, as well as recycled alloy waste, industrial gases, and refractory materials. Downstream applications primarily include petrochemicals, chemical equipment, marine engineering, energy and power, nuclear industry, aerospace, pharmaceuticals, environmental protection equipment, and high-end machinery manufacturing.

The global average price of ChNMA is approximately US$56,000 per ton, with sales volume of approximately 48,000–56,000 tons and an industry gross profit margin of 18%.

The future global ChNMA market will continue to develop towards higher corrosion resistance, higher strength, higher high-temperature performance, and lighter materials. The increasing demands for materials used in petrochemicals, marine engineering, nuclear power, hydrogen energy, new energy equipment, and high-end manufacturing,

particularly in complex corrosive environments, will drive demand for high-chromium, high-nickel, and high-molybdenum grades. Simultaneously, companies will strengthen the application of processes such as low-carbon smelting, waste alloy recycling, vacuum melting, precision rolling, and additive manufacturing to improve material purity and performance stability. Future market competition will focus more on the development of high-end grades, the manufacturing of complex specifications, cost control, supply chain stability, and domestic substitution capabilities. Asia is expected to become a significant region for demand growth.
