According to our (Global Info Research) latest study, the global Chromium Phosphate market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Chromium phosphate is a polyatomic ionic compound which either receives or donates electrons. The compound is also termed as orthophosphate of phosphoric acid or chromium salt which is insoluble in water. Different raw materials are used for manufacturing chromium salt such as ammonium dichromate, ethanol, orthophosphoric acid, and chromium trioxide. On account of its benefits, they are used in certain applications such as production of paints for coatings applied in corrosion protection and architectural purposes, and medical applications among others.

The market for medical applications has been gaining market share where chromium phosphates are used for treating leukemia and difficulties arising due to ailments including rheumatoid arthritis and hemophilia. Factors such as increasing demand for architectural coatings are expected to majorly drive the chromium phosphate market. Chromium phosphate based coatings are used as a paint base for exterior applications and extrusions in doors and windows. Other factors such as the growth of the corrosion inhibitor industry are expected to provide growth to the market.
