Abstracts

Chronic thromboembolic pulmonary hypertension is observed to be one of the leading causes of severe pulmonary hypertension. It is a type of clinical condition in which pulmonary vascular resistance increases giving rise to pulmonary hypertension and progressive heart failure. According to World Health Organization (WHO), approximately 0.15% to 0.55% of the patients suffering with acute pulmonary embolism develop chronic thromboembolic pulmonary hypertension. Due to non-specific symptoms observed in chronic thromboembolic pulmonary hypertension its diagnosis is complex. However, some of the prominent symptoms of chronic thromboembolic pulmonary hypertension are chest discomfort, breathlessness and fatigue. Chronic thromboembolic pulmonary hypertension market can be segmented on the basis of types of diagnosis such as transthoracic echocardiogram (TTE), ventilation-perfusion (V/Q) scan, pulmonary angiography, heart catheterization, computed tomography (CT) pulmonary angiography and other pulmonary function tests.

SCOPE OF THE REPORT:

This report studies the Chronic Thromboembolic Pulmonary Hypertension market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Chronic Thromboembolic Pulmonary Hypertension market by product type and applications/end industries.

According to market experts, the diagnosis cases of chronic thromboembolic pulmonary hypertension in regions such as Western Europe and North America was high due to presence of modern technology and rising public awareness about this disease.
