## Abstracts

According to our (Global Info Research) latest study, the global CIGS Photovoltaic Device market size was valued at USD 2729.8 million in 2022 and is forecast to a readjusted size of USD 4009.7 million by 2029 with a CAGR of 5.6% during review period.

A copper indium gallium selenide solar cell (or CIGS cell, sometimes CI(G)S or CIS cell) is a thin-film solar cell used to convert sunlight into electric power. It is manufactured by depositing a thin layer of copper indium gallium selenide solid solution on glass or plastic backing, along with electrodes on the front and back to collect current. Because the material has a high absorption coefficient and strongly absorbs sunlight, a much thinner film is required than of other semiconductor materials.
