Abstracts

The global CIGS Photovoltaic Device market size is expected to reach \$ 4009.7 million by 2029, rising at a market growth of 5.6% CAGR during the forecast period (2023-2029).

A copper indium gallium selenide solar cell (or CIGS cell, sometimes CI(G)S or CIS cell) is a thin-film solar cell used to convert sunlight into electric power. It is manufactured by depositing a thin layer of copper indium gallium selenide solid solution on glass or plastic backing, along with electrodes on the front and back to collect current. Because the material has a high absorption coefficient and strongly absorbs sunlight, a much thinner film is required than of other semiconductor materials.

This report studies the global CIGS Photovoltaic Device production, demand, key manufacturers, and key regions.
