The global Cinnamaldehyde Powder market size is expected to reach \$ 181 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

In 2025, global cinnamaldehyde powder production reached 12 thousand tons, with an average selling price of USD 6,800 per ton, production capacity of 16 thousand tons, and gross margin of 28%.

Cinnamaldehyde powder is a solid form product made from cinnamaldehyde as the main active ingredient, converted from liquid cinnamaldehyde into powder through adsorption, spray drying, or microencapsulation processes to improve stability, storage, transportation, and usability in downstream applications. Cinnamaldehyde powder has antibacterial, antifungal, flavoring, and fragrance functions, and is widely used in food additives, feed additives, daily chemical flavors and fragrances, and pharmaceutical intermediates.

Cinnamaldehyde powder belongs to the downstream products of natural flavor derivatives and functional plant extracts. Market demand mainly comes from food preservation and flavoring, antibiotic alternatives in feed additives, daily chemical fragrances, and pharmaceutical and health product applications. With increasing demand for natural plant extracts, natural preservatives, and antibiotic alternatives in feed, the cinnamaldehyde powder market continues to grow steadily. Production is mainly concentrated in China, especially in natural flavor raw material regions such as Jiangxi, Guangxi, and Hunan. The industry is characterized by many small and medium-sized manufacturers, with food-grade and feed-grade products as the main products, and a strong export orientation.
