CircRNA is a type of RNA molecule with a circular structure. From initially thinking it was useless to now discovering that it has important and complex functions, the importance of circRNA is increasingly being recognized. circRNA was first discovered as an ncRNA with a molecular sponge function. Clinically, due to its special molecular structure, researchers are generally interested in its potential as a biomarker. Recently, circRNA has been proven to have many functions other than encoding proteins. In the clinical setting, circRNA also has strong potential for application in vaccine preparation and targeted therapy.
