A fuse is a circuit component designed to protect electrical circuits from overcurrent conditions. It's essentially a thin wire or metal strip that melts when too much current flows through it, breaking the circuit and preventing damage to other components or the wiring. Fuses are typically housed in a protective casing and come in various shapes and sizes depending on their application and current rating. They're commonly used in household electrical systems, automotive electronics, industrial machinery, and other electrical systems where overcurrent protection is necessary.
