The global Circuit Controller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The circuit controller is the master command device that controls the starting, speed control, braking and reversing of the motor by changing the wiring of the main or control circuit and changing the resistance value in the circuit in a predetermined sequence. It consists of a program counter, an instruction register, an instruction decoder, a timing generator and an operating controller, which is the 'decision-making body' that issues the commands, i.e. coordinates and directs the operation of the entire computer system.
