A Circuit impedance tester is a test device used to measure the impedance (including resistance, inductance, and capacitance) of a circuit. It is commonly used to evaluate the performance of a circuit, detect faults or problems in a circuit, and provide quantitative data about the behavior of a circuit. The loop impedance tester can measure the impedance of an AC circuit, and calculate the impedance of the circuit by injecting a current or voltage signal of a specific frequency into the circuit and measuring the amplitude and phase difference of the response signal.
