## Abstracts

The global Circular Clarifier market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A circular clarifier is a type of wastewater treatment equipment used to remove solids and other impurities from water. It consists of a large circular tank with a rotating arm that scrapes the bottom of the tank, removing settled solids and directing them to a collection hopper. The clarified water is then discharged from the top of the tank. Circular clarifiers are commonly used in municipal wastewater treatment plants, as well as in industrial applications such as food processing and chemical manufacturing.
