According to our (Global Info Research) latest study, the global Circular Connectors market size was valued at USD 4496.4 million in 2023 and is forecast to a readjusted size of USD 5553.5 million by 2030 with a CAGR of 3.1% during review period.

Circular Connector applies to any electrical connector possessing multipin interconnects with cylindrical contact housings and circular contact interface geometries. Circular connectors are selected for ease of engagement and disengagement, their ability to conveniently house different types of contacts, their wide range of allowable contact voltages and currents, their ease of environmental sealing and their rugged mechanical performance. The primary disadvantage of the circular design is loss of panel space when used in arrays when compared to rectangular connectors.

Circular connectors are prized because of their durability. Many circular connectors have either threaded components on the ends or lock in other ways that prevent them from being forcibly pulled out of their socket when they are connected. This makes them ideal solutions for situations where force may be applied to the cable that they terminate or where the environment may be one where it's likely that some sort of contaminant could be introduced into an open connection.

The top three global manufacturers of circular connectors are TE Connectivity, Amphenol and ITT, with a combined market share of 21 per cent.

The Global Info Research report includes an overview of the development of the Circular Connectors industry chain, the market status of Military (Hybrid Connectors, Signal Connectors), Transportation (Hybrid Connectors, Signal Connectors), and key
