According to our (Global Info Research) latest study, the global Circular Knit Fabric market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Circular knit fabric is a type of fabric that is made using a circular knitting machine. It is characterized by its seamless construction, as the fabric is knitted in a continuous loop. This means that there are no seams or stitches running along the length of the fabric.

Circular knit fabric can be made from various types of yarns, such as cotton, polyester, nylon, or wool. It is commonly used in the production of garments, such as t-shirts, leggings, socks, and underwear, as well as in the manufacturing of home textiles and industrial fabrics.

Circular knit fabric has several advantages over other types of fabrics. It is stretchy and flexible, which makes it comfortable to wear and allows for ease of movement. It also has good drape and shape retention properties, meaning that it maintains its shape well and does not easily wrinkle or sag.

Additionally, circular knit fabric is often more cost-effective to produce compared to woven fabrics, as it requires less labor and time. It can also be produced in a wide range of colors, patterns, and textures, making it versatile and suitable for various applications.
