Abstracts

According to our (Global Info Research) latest study, the global Circular mRNA Drugs market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

In nature, circular RNA (circRNA) is ubiquitous in fungi, plants, insects, fish, and mammals, and even the genomes of some viruses are circular RNAs. Unlike linear mRNA, circular RNA is highly stable because its covalently closed ring structure protects it from exonuclease-mediated degradation. Therefore, vaccines based on circular mRNA have become a new vaccine option.
