According to our (Global Info Research) latest study, the global Circulating Tumor Cell(CTC)Detection market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The free tumor cell (CTC) test is a method used to detect and analyze tumor cells circulating in the blood. CTCs are cancer cells that fall off from the primary tumor and enter the blood circulation. By detecting these cells, important information about cancer progression, metastasis risk, and treatment efficacy can be provided. CTC detection is a non-invasive liquid biopsy technology that can monitor the development of cancer in real time and help doctors optimize personalized treatment plans. It is particularly suitable for early diagnosis of cancer, prediction of recurrence, and efficacy evaluation.
