According to our (Global Info Research) latest study, the global CIS Chips market size was valued at US\$ 23460 million in 2025 and is forecast to a readjusted size of US\$ 32110 million by 2032 with a CAGR of 4.6% during review period.

CIS chip is a solid-state image sensing device used in scanning and imaging technology, and is widely used in office equipment such as copiers, scanners, industrial automation, medical imaging and other fields. Compared with traditional CCD (charge-coupled device), CIS chip has the advantages of simple structure, small size, low power consumption, etc., and can provide high-resolution image capture capabilities at close range. The microprocessor built into the CIS chip can perform image processing tasks such as color correction and edge enhancement, thereby improving the quality of the final output.
