Cistern liners are flexible, waterproof membranes installed within water storage tanks or cisterns to prevent leaks, contamination, and structural degradation. Made from materials like PVC, EPDM, or other durable polymers, these liners create a secure barrier between the stored water and the cistern walls, protecting against cracks, corrosion, and seepage. They are commonly used to extend the lifespan of aging cisterns, improve water quality by minimizing exposure to contaminants, and reduce maintenance costs. Cistern liners are custom-fitted to the dimensions of the tank, making them suitable for a variety of shapes and sizes in both residential and industrial applications.
