Abstracts

The global Citrus Limon Peel Extract market size is expected to reach \$ 1192 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Citrus limon peel extract is a botanical extract derived from the peel of lemon (Citrus limon), used in cosmetics, personal care, food, nutraceutical, and specialty ingredient applications for its antioxidant, purifying, aromatic, and skin-conditioning properties. Depending on the target market and extraction route, it may be supplied as water-soluble extract, glycerin-based extract, propanediol-based extract, powder extract, bioflavonoid-rich extract, or application-specific standardized ingredient. From a value chain perspective, upstream includes lemon cultivation, peel collection, drying, milling, solvent or aqueous extraction materials, filtration media, carriers, packaging, and testing inputs; midstream involves peel preprocessing, extraction, concentration, standardization, drying or liquid formulation, filtration, and filling; downstream demand comes from skin care, hair care, personal care, food and beverage formulation, nutraceutical products, fragrance applications, and ingredient distribution. In 2025, the average selling price is approximately US\$18,500 per ton, global shipments are about 41,000 tons, and industry gross margin generally ranges from 24% to 40%, supported by natural-origin positioning, multifunctional use, and demand for citrus-derived active ingredients.

The market is moving toward higher-value and more application-specific botanical ingredients. Citrus limon peel extract is no longer used only as a simple citrus additive; it is increasingly positioned as a multifunctional ingredient for brightening, purifying, antioxidant, and scalp or oily-skin formulations.

A major trend is the expansion of standardized liquid extract formats. Supplier product

pages increasingly show glycerin-, water-, and propanediol-based forms, which improve formulation convenience and expand use in skin care, hair care, and clean-label personal care systems.

Another important direction is the stronger link between citrus peel utilization and by-product valorization. Lemon peel is increasingly treated not as waste but as a value-added raw material for extracts, fibers, flavors, and active compounds, which supports broader ingredient innovation and sustainability narratives.

Future growth will continue to come mainly from cosmetics and personal care, while food, nutraceutical, and natural ingredient uses provide incremental demand. At the same time, product positioning will increasingly depend on extraction method, flavonoid content, naturalness claims, and formulation compatibility.
