City Water Treatment Agent is used to treat urban tap water. These chemicals are used to remove impurities, microorganisms, and pollutants from the water, ensuring its safety and quality.

Common water treatment agents used in urban tap water treatment include:

Disinfectants: Disinfectants can kill bacteria, viruses, and other microorganisms in tap water. The most common disinfectants are chlorine compounds and ozone.

Purifiers: Purifiers can remove suspended solids, color, odor, and taste from tap water. The most common purifiers are activated carbon, diatomaceous earth, and polymers.

Stabilizers: Stabilizers can control the acidity and alkalinity of tap water, ensuring that its pH is stable and within a safe range. The most common stabilizers are sodium carbonate and phosphate.

Corrosion inhibitors: Corrosion inhibitors can prevent metal pipes in tap water from corroding and damaging. The most common corrosion inhibitors are oxalic acid and phosphate.

These treatment agents are usually added to the tap water treatment system in a certain proportion to ensure the quality and safety of the tap water. At the same time, these agents need to be treated specifically after use to prevent environmental pollution.
