## Abstracts

According to our (Global Info Research) latest study, the global Civetone market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Civetone is a natural aromatic compound that is found in the musk of certain animals, most notably the civet cat (*Civettictis civetta*). It is one of the key components responsible for the characteristic scent of civet musk.

Historically, civetone was obtained from the glands of civet cats. These animals have scent glands located near their anus that produce a musky secretion used for marking territory and attracting mates. Civetone was highly valued in perfumery for its unique and complex aroma, often described as musky, animalic, and slightly sweet.

However, due to ethical and animal welfare concerns, the use of civetone extracted directly from civet cats is now largely prohibited in the fragrance industry. Instead, synthetic civetone, created through chemical synthesis, is used as a substitute in perfumes and fragrances. Synthetic civetone replicates the aroma of the natural compound without the need for harvesting it from animals.

The Global Info Research report includes an overview of the development of the Civetone industry chain, the market status of Perfumes (Greater Than or Equal to 98%, Less than 98%), Aromatherapy (Greater Than or Equal to 98%, Less than 98%), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Civetone.
