Abstracts

The global Civetone market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Civetone is a natural aromatic compound that is found in the musk of certain animals, most notably the civet cat (*Civettictis civetta*). It is one of the key components responsible for the characteristic scent of civet musk.

Historically, civetone was obtained from the glands of civet cats. These animals have scent glands located near their anus that produce a musky secretion used for marking territory and attracting mates. Civetone was highly valued in perfumery for its unique and complex aroma, often described as musky, animalic, and slightly sweet.

However, due to ethical and animal welfare concerns, the use of civetone extracted directly from civet cats is now largely prohibited in the fragrance industry. Instead, synthetic civetone, created through chemical synthesis, is used as a substitute in perfumes and fragrances. Synthetic civetone replicates the aroma of the natural compound without the need for harvesting it from animals.

This report studies the global Civetone production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Civetone, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
