According to our (Global Info Research) latest study, the global Civil Micro-hyperbaric Oxygen Therapy Hard Chambers market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Hyperbaric oxygen therapy (HBOT) is a type of treatment used to speed up healing of carbon monoxide poisoning, gangrene, and wounds that won't heal. It is also used for infections in which tissues are starved for oxygen. For this therapy, you enter a special chamber to breathe in pure oxygen in air pressure levels 1.5 to 3 times higher than average. The goal is to fill the blood with enough oxygen to repair tissues and restore normal body function. Micro-hyperbaric oxygen chambers are used in non-medical institutions, such as office buildings, clubs, gyms, plateau border outposts, nursing homes and families. The design pressure requirement of the micro-hyperbaric oxygen chamber shall not exceed 0.1Mpa. The micro-hyperbaric oxygen chamber mainly serves non-hospitalized customers with sub-health or stable chronic diseases who have oxygen inhalation needs, and plays a more preventive health care or conditioning role.
