According to our (Global Info Research) latest study, the global Civil Unmanned Surface Vessel market size was valued at US\$ 47.1 million in 2024 and is forecast to a readjusted size of USD 148 million by 2031 with a CAGR of 18.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A civil unmanned surface vessel (USV) is a type of autonomous or remotely controlled boat or ship designed for civilian applications on the water. These vessels are typically used for tasks such as environmental monitoring, data collection, surveying, and maritime security, among others. Unlike manned vessels, civil USVs do not require a crew on board, which allows them to operate in hazardous or remote environments without putting human lives at risk. They are equipped with sensors, GPS, and communication systems to navigate, collect data, and perform tasks with minimal human intervention. Civil USVs can be used in areas such as marine research, offshore oil and gas monitoring, and search and rescue operations.
