Weather detection radar, It is a kind of weather radar and a main tool for monitoring and warning severe convective weather. Its working principle is to detect the spatial distribution and vertical structure of precipitation by transmitting a series of pulse electromagnetic waves and using the scattering and absorption of electromagnetic waves by precipitation particles such as clouds, rain and snow, and use this as a warning and tracking precipitation system. The commonly used wavelength of weather radar is mostly in the range of 1-10cm. This report studies civil weather detection radar.
