## Abstracts

The global Civilian Space Travel Insurance market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032). Civil space travel insurance is an emerging sub-segment of space insurance within commercial space activities, specifically referring to comprehensive risk protection provided to ordinary citizens who pay to participate in space travel. It is not a single product, but rather a customized financial solution system covering the entire space travel process. Its core coverage is typically finely divided according to mission phases, such as the launch phase, the on-orbit phase, and the reentry and return phase. This insurance aims to transfer potential personal injury, health risks, personal property loss, and economic losses due to mission cancellation or delays that participants may face at each phase. It also covers the operator's legal liabilities to passengers and third parties. Currently, this type of insurance is mainly provided by highly customized solutions through insurance brokers by global professional insurance and reinsurance groups, forming an indispensable cornerstone of risk management in the commercial space tourism industry.

With companies like Blue Origin driving space travel towards commercialization and normalization, the civil space travel insurance market has broad prospects and is in a crucial early stage of evolution from highly customized to gradually standardized and productized. In the short term, the market will grow rapidly with the increase in flight frequency and passenger numbers, and standardized clauses covering ground risks such as 'travel cancellation' are expected to emerge first. In the medium to long term, insurance companies will leverage accumulated flight data to develop segmented insurance products targeting different orbital altitudes, mission durations, and health groups, enabling more precise pricing. Leading international insurance and reinsurance groups and professional insurance brokers will continue to dominate this specialized market. Ultimately, this insurance will not only serve as an economic compensation tool

but will also drive improvements in safety standards across the entire industry through data-driven approaches, providing core financial and safety support for the development of civilian space tourism from high-end exploration into a large-scale industry.
