According to our (Global Info Research) latest study, the global Civilian Two-person Rotorcraft market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A rotorcraft is an 'aircraft' that uses unpowered rotors to provide lift and is heavier than air. The thrust is provided by the propulsion device, and the propulsion device has two kinds of propeller and jet. When moving forward, the air flow blows the rotor to generate lift. It cannot take off or hover vertically. It is often necessary to give the rotor an initial power during takeoff to increase the lift of the rotor. With the help of rotors, a near-vertical landing can be done.
