Abstracts

Cladding systems. Wall cladding means that the exterior of a building is covered with panels of a different material than they cover up. To maintain the structure, frame and exterior walls of a building, certain panel systems are applied. The panels are installed over other materials used in construction.

Scope of the Report

This report focuses on the Cladding Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Vinyl accounted for the largest market share in 2017. This is because of its low cost and easy installation techniques. Vinyl siding is the most preferred siding for residential buildings. Vinyl siding is durable and can last for up to 30 to 40 years. Also, growing construction projects, both residential and commercial, have driven the market in this segment. Other cladding materials include stone & brick, wood, stucco & EIFS, metal, and fiber cement.

The worldwide market for Cladding Systems is expected to grow at a CAGR of roughly 7.0% over the next five years, will reach 259900 million US\$ in 2023, from 173600 million US\$ in 2017, according to a new GIR (Global Info Research) study.
