According to our (Global Info Research) latest study, the global Clamp-type Thermal Mass Flowmeter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Clamp-type thermal mass flow meters usually consist of a sensor and a control unit. They have the characteristics of high accuracy, wide measurement range, fast response, no need for pressure correction, no moving parts, and wide application. When using a clamp-on thermal mass flowmeter, proper installation, calibration and maintenance should be carried out according to the specific application requirements to ensure the accuracy and reliability of the measurement results.

A clamp-type thermal mass flowmeter is an instrument used to measure fluid mass flow. It is based on the principle of heat conduction and determines the mass flow rate of the fluid by measuring the cooling effect of the fluid on the sensor heating element.
